

Data Dictionary

Source, cleaned, and enriched field definitions

1. Source Fields

The original dataset contains **Document** and **Topic_group**. The cleaned dataset standardizes these to **ticket_id**, **document**, and **topic_group**.

2. Cleaned Fields

Field	Type	Definition
ticket_id	Integer	Unique identifier, 1–47,837.
document	Text	Cleaned ticket description.
topic_group	Text	Source support category.

3. Enriched / Database Fields

Field	Type	Definition
ticket_id	INT	Primary key.
document	TEXT	Ticket description.
category_id	INT	Category foreign key.
priority_id	INT	Priority foreign key.
urgency_score	INT	Numeric urgency score.
urgency_reason	VARCHAR(500)	Reason for urgency classification.
work_blocked	BOOLEAN	Work is blocked.
deadline_present	BOOLEAN	Deadline is present.
explicit_urgency	BOOLEAN	Urgency explicitly stated.
service_unavailable	BOOLEAN	Service unavailable.
security_issue	BOOLEAN	Security issue indicated.
multiple_users	BOOLEAN	Multiple users affected.
business_critical	BOOLEAN	Business-critical impact.
limited_functionality	BOOLEAN	Functionality is limited.
classification_status	VARCHAR(50)	Processing status.
classification_method	VARCHAR(50)	Classification method.
classified_at	DATETIME	Classification timestamp.
created_at	TIMESTAMP	Record creation timestamp.

4. Data Quality

- 47,837 source rows.
- No missing values identified in the original dataset.
- No duplicate rows identified.
- Document field contains 47,837 unique descriptions.
