

Dashboard Requirements

Functional and visual requirements for the Power BI report

1. Audience

IT support/operations stakeholders and analysts who need concise workload, priority, risk, and investigation views.

2. Requirements

- Consistent KPI definitions across pages.
- KPI-first visual hierarchy.
- Category and priority comparisons.
- Separate workload, risk, and investigation perspectives.
- Avoid dense ticket-level tables when they do not add decision value.

3. Page Specifications

Page	Business Question	Core Content
1. IT Support Operations Overview	What does the overall IT support workload look like?	Total, Critical, Average Urgency, Critical Rate; category, priority, critical and security views.
2. Priority & Risk Analysis	Why are these tickets risky, and where is operational risk concentrated?	Medium, Security, Work Blocked, Business Critical; priority, urgency, risk, deadline and work-blocked analysis.
3. IT Action & Investigation	Which tickets should IT investigate or act on?	Critical, Deadline, Security, Work Blocked; urgency, high-urgency, risk profile and operational-risk analysis.

4. Visual Principles

- Minimal dark executive theme.
- Royal blue with restrained maroon accents.
- Clear title → KPI → analytical visual hierarchy.
